Abstract
Piperaceae is one of the largest family in Angiospermae, which has economic value, both for traditional medicine ingredients and spices. In Bukit Barisan Selatan National Park (TNBBS), there are many species of Piperaceae which are relatively abundant for some species. Conservation efforts need to be done considering the conversion of forests become severe and also economic reason that can be obtained from this plant. Exploration activity has been carried out in order to collect various species of Piperaceae in TNBBS, and then planted in the Liwa Botanical Gardens which is located in Liwa, Lampung Barat regency as the conservation efforts. Some researches have been done to adapt some Piper at the Liwa Botanic Garden. From the field, we have obtained 12 species of Piper.
